

Website Audit Report – srivedicpuja.com

Report Type: Website Testing & UI/UX Review

Summary

I reviewed the srivedicpuja.com website across key user flows such as registration, booking, and payment.

Currently, the website has multiple critical issues that directly affect core functionality. These problems prevent users from completing bookings and create a poor user experience.

Fixing individual issues may not be efficient due to deeper structural problems. A complete rebuild is recommended for better performance, reliability, and scalability.

1. Critical Functional Issues

1.1 Home Puja Page Not Loading (Critical)

Issue:

The Home Puja page shows a blank white screen when accessed from any section.

Impact:

Users cannot book one of the main services.

Suggested Fix:

Fix rendering issue or rebuild page structure.

Expected Improvement:

Users can successfully access and book Home Puja services.

1.2 OTP Not Received During Registration (Critical)

Issue:

Users do not receive OTP while registering.

Impact:

New users cannot create accounts.

Suggested Fix:

Fix OTP service integration and validation flow.

Expected Improvement:

Smooth and reliable user registration.

1.3 UPI Payment Flow Broken (Critical)

Issue:

Entering UPI ID shows OTP option instead of opening UPI payment popup.

Impact:

Payment process fails completely.

Suggested Fix:

Fix UPI gateway integration and trigger correct payment intent.

Expected Improvement:

Successful and seamless UPI payments.

1.4 Empty Service Pages

Issue:

Pages like Katha-Jaap and Pind-Dan show “No Content Found”.

Impact:

Creates an unprofessional impression and reduces trust.

Suggested Fix:

Add proper content or hide incomplete sections.

Expected Improvement:

Improved credibility and user trust.

2. UI & UX Issues

2.1 Developer Placeholder Visible

Issue:

Text like “Rename it to Free after puja completion” is visible on homepage.

Impact:

Looks unprofessional and unfinished.

Suggested Fix:

Remove all development notes before production.

2.2 Forced Login Without Context

Issue:

Clicking features like Kundli or Name Correction redirects directly to login.

Impact:

Users leave without understanding the feature.

Suggested Fix:

Add landing pages explaining features before login.

Expected Improvement:

Better engagement and lower bounce rate.

2.3 UI Rendering & Visibility Issues

Issue:

Some sections (like Home Puja) are not visible or appear broken.

Impact:

Users cannot interact properly with the interface.

Suggested Fix:

Fix frontend rendering and layout issues.

3. Technical & SEO Issues

3.1 Inconsistent URL Structure

Issue:

Mix of camelCase and kebab-case URLs.

Impact:

Bad for SEO and structure clarity.

Suggested Fix:

Use consistent kebab-case URLs.

3.2 Console & Security Errors

Issue:

Cross-origin and iframe-related errors visible in console.

Impact:

Indicates improper configuration and potential security risks.

Suggested Fix:

Fix server and frontend integration issues.

Conclusion & Recommendation

The website currently has major functional failures in key areas:

- Registration
- Booking
- Payment

These are not minor issues — they directly impact revenue and user trust.

Fixing them individually may take more time and still not guarantee stability.

Recommended Approach: Complete Rebuild

A rebuild will help to:

- Create a stable authentication system
- Fix payment flow completely
- Ensure smooth booking experience
- Improve UI/UX quality
- Make the website scalable and SEO-friendly

Final Feedback

The idea and services are strong, but the current implementation is unstable.

With a proper rebuild on a modern tech stack, the platform can deliver a much better experience and increase successful bookings.

Overall Score

- **Design:** 5/10
- **Functionality:** 3/10
- **User Experience:** 4/10
- **Usability:** 3/10
- **Improvement Potential:** 9/10
